## IEG PI NOTICE

No. 72-75

**TITLE/SIGNIFICANCE:** A new semitrailer transporter, observed at Volgograd Plant 221, may be for a new solid propellant tactical surface to surface missile.

**COMMENT:** A new type of semitrailer transporter, observed at Volgograd Plant 221, is similar to the semitrailer transporter associated with the SS-1 SCUD missile. The new transporter however, is of heavier construction and has two tandem axles as opposed to the single axle SCUD transporter. This suggests that the new transporter is designed to carry a heavier missile (probably solid propellant). The new transporter is towed by the ZIL-130 truck tractor.
